Mean 11.528; Variance 1.960; scale 5.882

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: mixed (see below); Vector: pT773D-Pac
/(Pharmacia) with a modified polylinker; Site_1: Not I;
Site_1: Eco RI; Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NbHPU, and fetal heart NbHH19W) were mixed, and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260332-265223,
340488-345479, and 484488-489479."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DNA encoding estrogen receptor - useful in screening assay to identify novel ligands or hormonal analogues Claim 4; Page 35-37; 45pp; English. This sequence represents a novel oestrogen binding protein isolated from human testis cDNA in order to study upstream translation-initiation codons using 5' RACE-PCR technology. This receptor is able to bind and be activated by estradiol, estone and estriol, can be used in a screening assay for the identification of new drugs e.g. novel ligands or hormonal analogues. Sequence 530 AA;

                                                        A novel human orphan receptor (W14724) is related to the known oestrogen receptor ER-alpha, and has been designated ER-beta. It is an oestrogen receptor-related nuclear receptor. The ER-beta amino acid sequence was deduced from a cDNA clone (T62843) isolated from a human testis cDNA library. Rat, human and mouse ER-beta (W14723-25) can be used to isolate molecules for use in the treatment of cardiovascular diseases, central nervous system diseases, osteoporosis, prostate or ovarian cancer or benign prostatic hyperplasia and to test environmental chemicals for cestrogenic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human oestrogen receptor beta (ER-beta).

NA encoding estrogen receptor - useful in screening assay to lidentify novel ligands or hormonal analogues claim 4; Page 18-20; 45pp; English.

This sequence represents a novel oestrogen binding protein. The cDI sequence which encodes this protein can be alternatively spliced resulting in the detection of additional transcripts (see T88413). This receptor is able to bind and be activated by estradiol, estone estriol, can be used in a screening assay for the identification of drugs e.g. novel ligands or hormonal analogues.

Rat oestroge
Orphan recep
                                                      Claim 1; Fig 1; 45pp; English.

A novel rat orphan receptor (W14723) is related to the known oestrogen receptor ER-alpha, and has beeignated ER-beta. It is an oestrogen receptor related nuclear receptor. The ER-be amino acid sequence was deduced from a cDNA clone (T62842) isolate from a rat prostate cDNA library. Rat, human and mouse ER-beta (W14723-25) can be used to isolate molecules for use in the treatment of cardiovascular diseases, central nervous system diseases, osteoporosis, prostate or ovarian cancer or benign prostatic hyperplasia and to test environmental chemicals for

         This partial sequence represents a splice variant of a novel cestribinding protein, detected by screening a human testis cDNA library. This protein contains an alternative exon 8 (exon 8B) of the novel cestrogen receptor represented. As a consequence of the introduction
                                                                                                                                                                                                     Oestrogen

                                         DNA encoding estrogen receptor - useful in screening assay to identify novel ligands or hormonal analogues (laim 4; Page 30-32; 45pp; English.
This sequence represents a splice variant of a novel oestrogen binding protein isolated from human thymus tissue. This protein contains an alternative exon 8 (exon 8C) of the novel oestrogen receptor represented in T88412. This novel receptor is able to bind and be activated by estradiol, estone and estriol, can be used in a screening assay for the identification of new drugs e.g. novel ligands or hormonal analogues. This variant does not contain an AF-2 region and therefore probably lacks the ability to modulate transcription of target genes in a ligand dependent faction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  W33214 standard; W33214;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      encoding the novel receptor is immediately terminated, creating a truncation of the carboxy terminus of the novel receptor. This receptor is able to bind and be activated by estradiol, estone and estriol, can be used in a screening assay for the identification of new drugs e.g. novel ligands or hormonal analogues. This variant does not contain an AF-2 region and therefore probably lacks the ability to modulate transcription of target genes in a ligand dependent fashion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    estone; estric

                                                                                                                                                                                                                                                                                                                   DNA encoding estrogen receptor - useful in screening assay to identify novel ligands or hormonal analogues Claim 4: Page 16-17; 45pp; English.

This sequence encodes the ligand binding domain of a novel constrogen binding protein, detected by screening a human testis cDNA library. This receptor is able to bind and be activated by estradiol, estone and estriol, can be used in a screening assay identification of new drugs e.g. novel ligands or hormonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human oestrogen receptor protein ligand binding cestrogen receptor protein; steroid; estradiol; cestradiol; ligand binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LT 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               eucaryotic hosts.

Solutions of the protein protein an expression system from cDNA operably inked to control sequences compatible with eukaryotic host cells.

This method allows expression under conditions which favour appropriate post-translational processing. It also produces large amts. of purified protein useful in the design of agonist and antagonist cpds. for study of the mechanism of action of the steroid binding proteins in general, and for use in diagnostic assays for the proteins or antibodies to them. These assays are important in, eg the diagnosis of tumour sensitivities to steroid metabolism. Suitable host cells are VERO, Sequence 595 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNAs encoding hormone receptors and the hormone receptors themselves claimed. The DNA can be used to make the hormone receptor proteins an functional modified forms in quantities not previously possible. The receptor proteins can be used to screen cpds. for receptor agonist or receptor antagonist activity. They can also be used in diagnostic ass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             comprising glucocorticoid, minerale and novel hormone receptors Example; Fig III-2; 243pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 17; Fig V-2(B)-1 and -2; 243pp; English.

DNAs encoding hormone receptors and the hormone receptors themselves are claimed. The DNA can be used to make the hormone receptor proteins and functional modified forms in quantities not previously possible. The receptor proteins can be used to screen cpds. for receptor-argonist or receptor-antagonist activity. They can also be used in diagnostic assays. Also claimed is pure DNA encoding oestrogen related receptors will provide here? and here? and here?
                                                                                                          comprising glucocorticoid, mineralocorticoid, thyroid hormone and novel hormone receptors
and novel hormone receptors
Claim 17; Fig V-1(B)-1 and -2; 243pp; English.

DNAs encoding hormone receptors and the hormone receptor proteins an functional modified forms in quantities not previously possible. The functional modified forms in quantities not previously possible. The receptor proteins can be used to screen opds. for receptor-agonist or receptor-antagonist activity. They can also be used in diagnostic ass also claimed is pure DNA encoding oestrogen-related receptors hERRI and hERR2 and hERRI and hERR2. The new hERRI and hERR2 receptors will properly the province of the provin
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant DNA encoding hormone recpetors - comprising glucocorticoid, mineralocorticoid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB; N8092

Claim 24; Fig I-2(1) to (2); 243pp; English.

DNAs encoding hormone receptors and the hormone receptors themselves are claimed. The DNA can be used to make the hormone receptor proteins and functional modified forms in quantities not previously possible. The receptor proteins can be used to screen cpds. for receptor-agonist or receptor-antagonist activity. They can also be used in diagnostic assays. Sequence 777 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 3; Page 50-53; 92pp; French.

Contains is the amino acid sequence of in the region encoding the ligand correceptor (NGR), especially mutated in the region encoding the ligand content of the composition (LBD), such that the activity of the receptor is induced concerned by a synthetic glucocorticoid ligand than by a natural collection of transition mutation is a point mutation in the coding concerned at transition mutation) generated by site-directed mutagenesis. This causes a replacement of the lie region between helices in and 12. This causes a replacement of the region between helices in and 12. The mutant coding sequence is used to generate a fusion protein comprising a protein whose activity is to be regulated by and fused to the NGR sequence. The protein is preferably a recombinase, especially the cre recombinase from bacteriophage P1 (see V05702). The sequence containing the fusion protein, and vectors containing it, are used to treat colls either ex vivo or in vitro for use in gene therapy. Vectors containing and expressing the protein allow the transfer of heterologous genes to the cells' genome by recombinase-directed recombination at loxp sites. By using a mutated LBD, normal physiological levels of the ligand of the induce recombinated LBD, normal physiological levels of the ligand can be combinated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

                                                                                                                                                                                                                                                                                                                                                                         Manmalian cell having a plurality of steroid receptor response elements - can be directly detected when bound by fluorescently related steroid receptor labelied steroid receptor SC Claim 9; Page 67-72; 100pp; English.

A fusion protein (W17789) comprises jellyfish green fluorescent protein (GFP) fused to rat glucocorticoid receptor (GR) via a Glycortein (GFP) fused to rat glucocorticoid receptor (GR) via a Glycortein (GFP) fused to rat glucocorticoid receptor (GR) via a Glycortein and cortein and the GFP moiety contains an S65T substn. and the GFP moiety contains and S7T substn. and the GFP moiety contains and ATCC CRI-11988). Contg. a number of steroid receptor response elements in array, is used to visualise directly the interaction of GR and its binding site in chromatin using the fluorescently-labelled GR. This provides the direct opportunity to visualise receptor/target interactions and can be used to screen for ligands that activate gene targetting or translocation of steroid receptors in the nucleus of a mammalian cell.
                                                                                                                                                                                                                                                                                                                 Query Match
